Paracryl you need
for your project

Paracryl

The complete range of sealants for the professional painter

For every project

Paracryl sealants can be used for sealing moldings, skirting boards, stairs, window sills, window and door frames, walls and ceilings... Paracryl adheres to many porous surfaces, such as wood, plaster, masonry, tile, concrete...

Excellent processability

Paracryl is very easy to apply and the joints are easy to smooth off with water.

Safe in use

Paracryl sealants are water-based and low-odour painter's mates. They contain no solvents and are phthalate free. All Paracryl sealants comply with the French VOC emission class A+. Paracryl Pro has the EC1^{PLUS} label for its very low VOC emission.

Perfectly paintable

Paracryl joints are paintable after curing with most water and solvent based paints.
